

Vašingtonas konvencijas par tirdzniecību ar
apdraudētajām savvaļas dzīvnieku un augu sugām
(CITES) pielikumos iekļauto
PUTNU NOTEICĒJS

Kā lietot noteicēju?

Šis noteicējs izveidots ar mērķi atvieglot kontrolējošo iestāžu darbu un atpazīt CITES sugas (skatīt [?-2](#)). Noteicējs veidots muitas iestāžu darbiniekiem, tomēr to ērti var izmantot arī iekšzemes kontrolējošās iestādes.

Lai lietotu noteicēju, nav nepieciešamas priekšzināšanas par putniem. Soli pa solim sekojot instrukcijai, kas aprakstīta noteicējā, ir iespējams atpazīt simtiem tirdzniecībā sastopamu CITES sugu.

Noteicēja pamatprincips ir sarkanas, dzeltenas un zilas krāsas izcelšana. Šīs trīs krāsas tiek izmanto-
tas, lai izceltu katrai sugai raksturīgo krāsojumu. Uzmanīgi sekojot instrukcijām un pievēršot
uzmanību šo trīs krāsu izvietojumam, iespējams identificēt konkrētu sugu .

Pirms sugas identificēšanas ar ilustrāciju sēriju palīdzību atslēgas pazīmju lapā (zaļās lapas)
jāsalīdzina pazīmes uz putna galvas un kājām. Atslēgas pazīmju lapas (zaļās lapas) palīdzēs nokļūt
līdz aprakstošajām lapām (zilās un dzeltenās lapas), kurās iespējams atrast interesējošo sugu.

Visvieglāk identificējamās sugas ir attēlotas aprakstošajās zilajās lapās. Neliels treniņš ar
aprakstošajām zilajām lapām ļaus ātri apgūt raksturīgo pazīmju atšķiršanas prasmes un noteikt
sugas.

Aprakstošajās dzeltenajās lapās attēlotas sugas, kuru noteikšana ir vidēji grūta. Lai nekļūditos
sugas identificēšanā, svarīgi pievērst uzmanību pazīmēm, kas raksturīgas konkrētajai sugai. Pēc
neliela treniņa iespējams viegli noteikt aprakstošajās zilajās un dzeltenajās lapās iekļautās sugas.

Aprakstošajās oranžajās lapās ir iekļautas sugas, kuru noteikšanā pieaicināms speciālists-
ornitologs. Lai pārliecinātos, ka noteiktā suga, kas iekļauta oranžajās lapās, idenfīcēta pareizi,
jākonsultējas ar speciālistu.

Šis noteicējs ir tikai palīglīdzeklis CITES kontrolējošajām iestādēm, kas praksē palīdzēs noteikt daļu
tirdzniecībā sastopamo sugu. CITES sugu identifikāciju vislabāk veiks speciālisti noteiktā zinātnes
apakšnozarē.

Pirms darba ar noteicēju, rūpīgi iepazīstieties ar ievadu (violetās lapas), kurā aprakstīta noteicēja
uzbūve un darbības principi.

Kā lietot noteicēju?

E
?

Kas ir CITES?

CITES - The Convention in International Trade on Endangered Species of Wild Fauna and Flora, latviski - Konvencija par starptautisko tirdzniecību ar apdraudētajām savvaļas dzīvnieku un augu sugām (1973. gada Vašingtonas konvencija).

CITES ir starptautiska vienošanās starp 175 dalībvalstīm, kuras mērķis ir nodrošināt, ka starptautiskā tirdzniecība ar savvaļas augu un dzīvnieku sugām neapdraud to pastāvēšanu dabā.

CITES pielikumos pavisam ir iekļauti vairāk nekā 30 tūkstoši sugu. Atkarībā no apdraudētības pakāpes tās ir sadalītas 3 pielikumos - I, II, un III (Eiropas Savienībā - 4. pielikumos - A, B, C un D).

- I pielikumā ir iekļautas sugas, kurām draud iznīkšana un kuru pastāvēšanai kaitē vai var kaitēt tirdzniecība ar tām;
- II pielikumā ir iekļautas sugas, kurām šobrīd vēl nedraud iznīkšana, bet kuras var kļūt apdraudētas, ja tirdzniecība ar šo sugu īpašiem netiks pakļauta stingrai kontrolei;
- III pielikumā ir iekļautas sugas, kas tiek aizsargātas kādā no dalībvalstīm un kuru tirdzniecības kontrolei nepieciešama sadarbība ar citām dalībvalstīm.

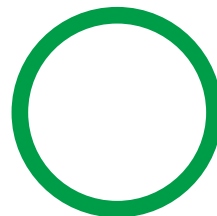

Pēc līdzīgiem kritērijiem sugas pa pielikumiem ir sadalītas arī Eiropas Savienības (ES) regulā 338/97:

- **A** - CITES I pielikums un citas sugas, kas ir tām līdzīgas pēc izskata vai kurām ir nepieciešama tik pat stingra aizsardzība;
- **B** - CITES II pielikums un citas sugas, kas ir tām līdzīgas pēc izskata vai kurām ir nepieciešama tik pat stingra aizsardzība, kā arī sugas, kas var būt vai ir bīstamas vietējām sugām;
- **C** - CITES III pielikums un tās CITES II pielikuma sugas, kuras nav iekļautas ES regulas 338/97 B pielikumā;
- **D** - daļa CITES III pielikumā iekļauto sugu un sugas, kas nav iekļautas CITES pielikumos, bet kurām ir nepieciešama tirdzniecības uzraudzība.

Notecējā lietotās piktogrammas

CITES I, II vai III pielikuma suga.

Nav CITES suga

Tirdzniecība ar šo sugu notiek saskaņā ar CITES un Eiropas Savienības regulu nosacījumiem.

* ES regula 338/97 - Padomes Regula (EK) Nr. 338/97 (1996.gada 9.decembris) par savvaļas dzīvnieku un augu sugu tirdzniecību, regulējot tirdzniecību ar tām.

Kā lietot noteicēju?

Kādas sugas attēlotas noteicējā?

- visas CITES I pielikuma sugas, kuru komerciāla izmantošana ir aizliegta*;
- tirdzniecībā visbiežāk sastopamās CITES II un III pielikuma sugas;
- tirdzniecībā bieži sastopamas sugas, kas nav CITES sugas, bet kuras varētu sajaukt ar citām CITES sugām.

Tā kā CITES pielikumos iekļautas gandrīz visas papagaiļu sugas, kas veido lielu skaitu no visām noteicējā iekļautajām sugām, lai vienkāršotu sugu identificēšanu, attēloti tikai tēviņi (izņemot atsevišķus gadījumus). Lai gan dažām sugām mātītes un juvenīlie putni ārēji atšķiras no tēviņiem, visbiežāk starp dzimumiem atšķirības nepastāv.

Saraksts ar CITES pielikumos iekļautajām sugām, kas nav attēlotas noteicējā, atrodams B sarakstā (skatīt [?-23](#)).

Kādas sugas attēlotas plakātā?

Noteicēja pielikumā iekļauts plakāts, kurā attēlotas visas I pielikuma sugas. Šīs sugas ir ļoti retas un apdraudētas un to atrašanās tirdzniecībā ir aizliegta.

Plakātā esošie attēli neatšķiras no noteicējā esošajiem. Attēli plakātā izvietoti tādā kārtībā, kādā tie atrodami noteicējā (skatīt [?-15](#)). Piemēram, putni, kuriem uz kājām ir pieši ($\frac{0-m}{1}$) atrodas plakāta augšpusē, savukārt nelieli putni bez cekuliem ($\frac{0-m}{16}$) atrodami plakāta labajā apakšējā stūrī.

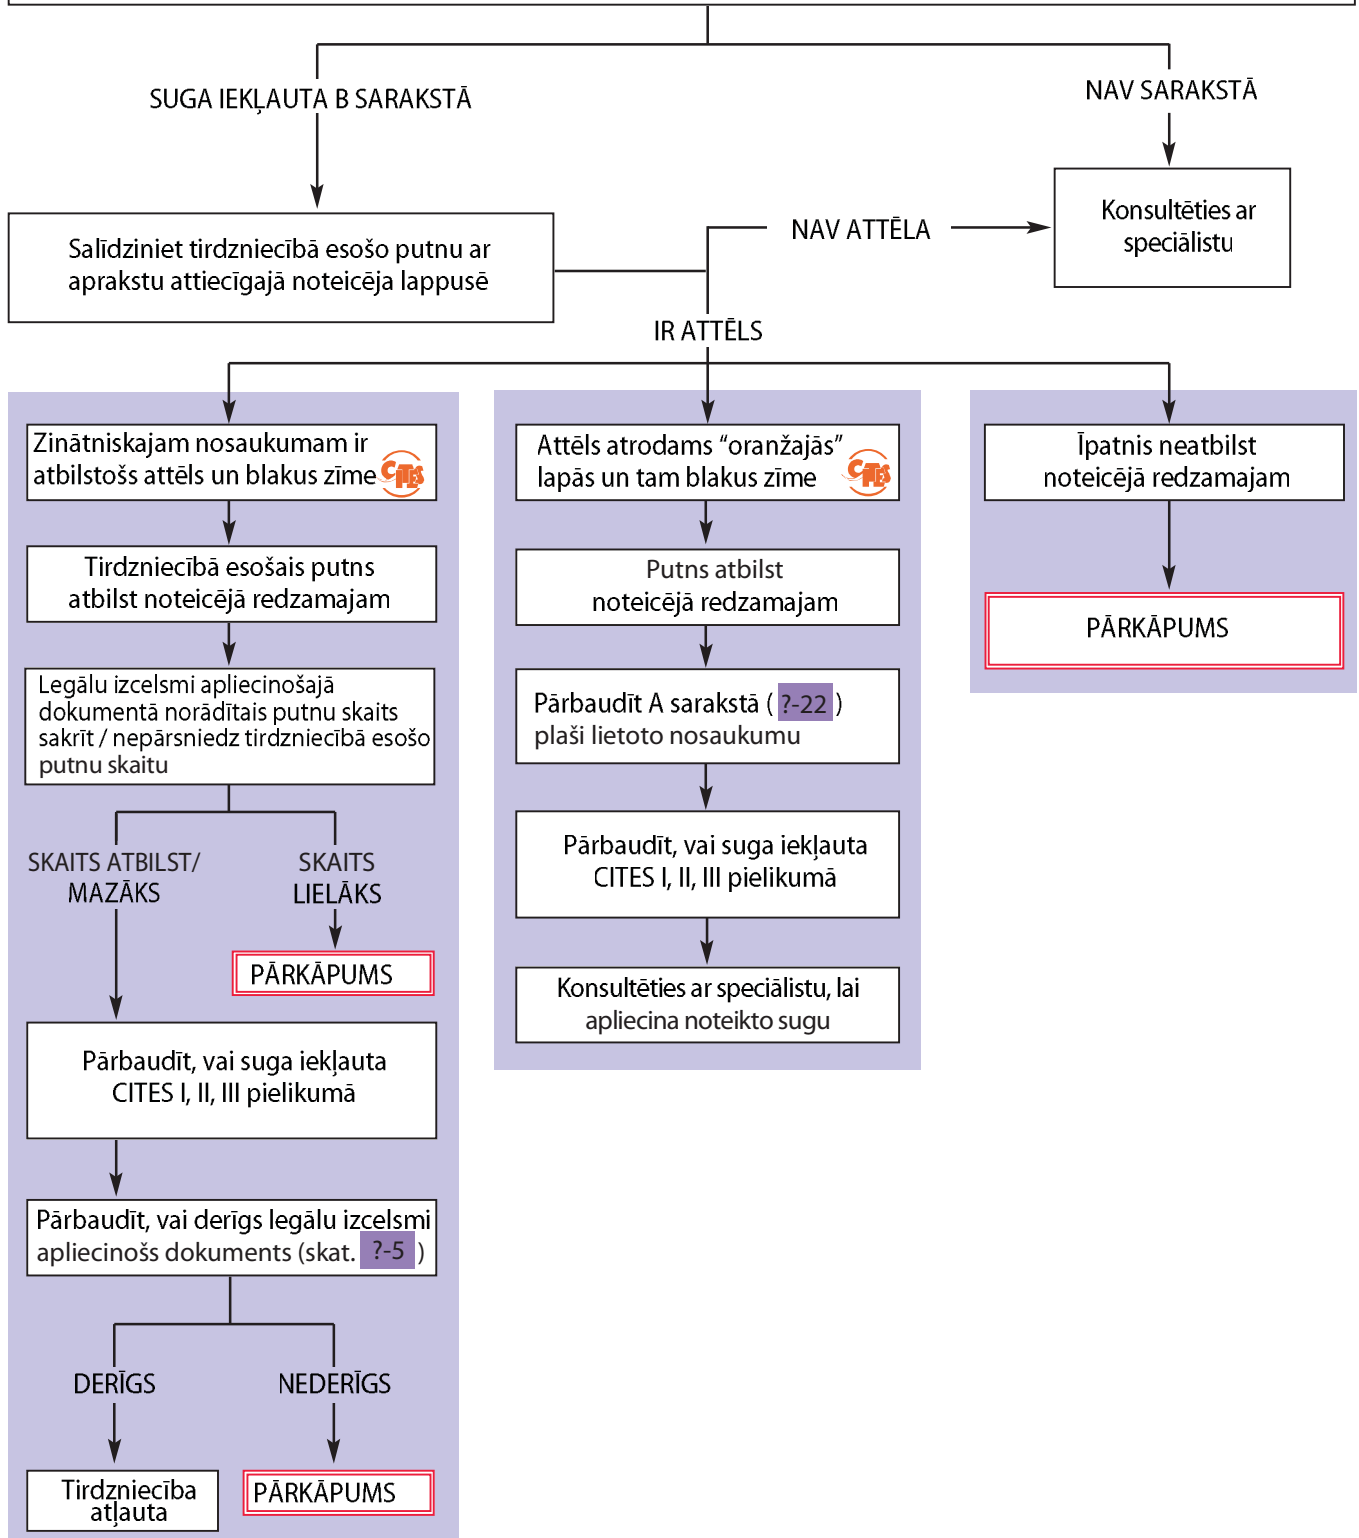

Plakāts sniedz ilustratīvu informāciju par tirdzniecībā visvairāk apdraudētajām sugām.

* I pielikuma sugu komerciāla izmantošana ir atļauta izņēmuma gadījumā, piemēram, ja suga ir dzimusi un augusi nebrīvē, un šādu izmantošanu pieļauj konkrētas valsts normatīvie akti.

Kā lietot noteicēju?

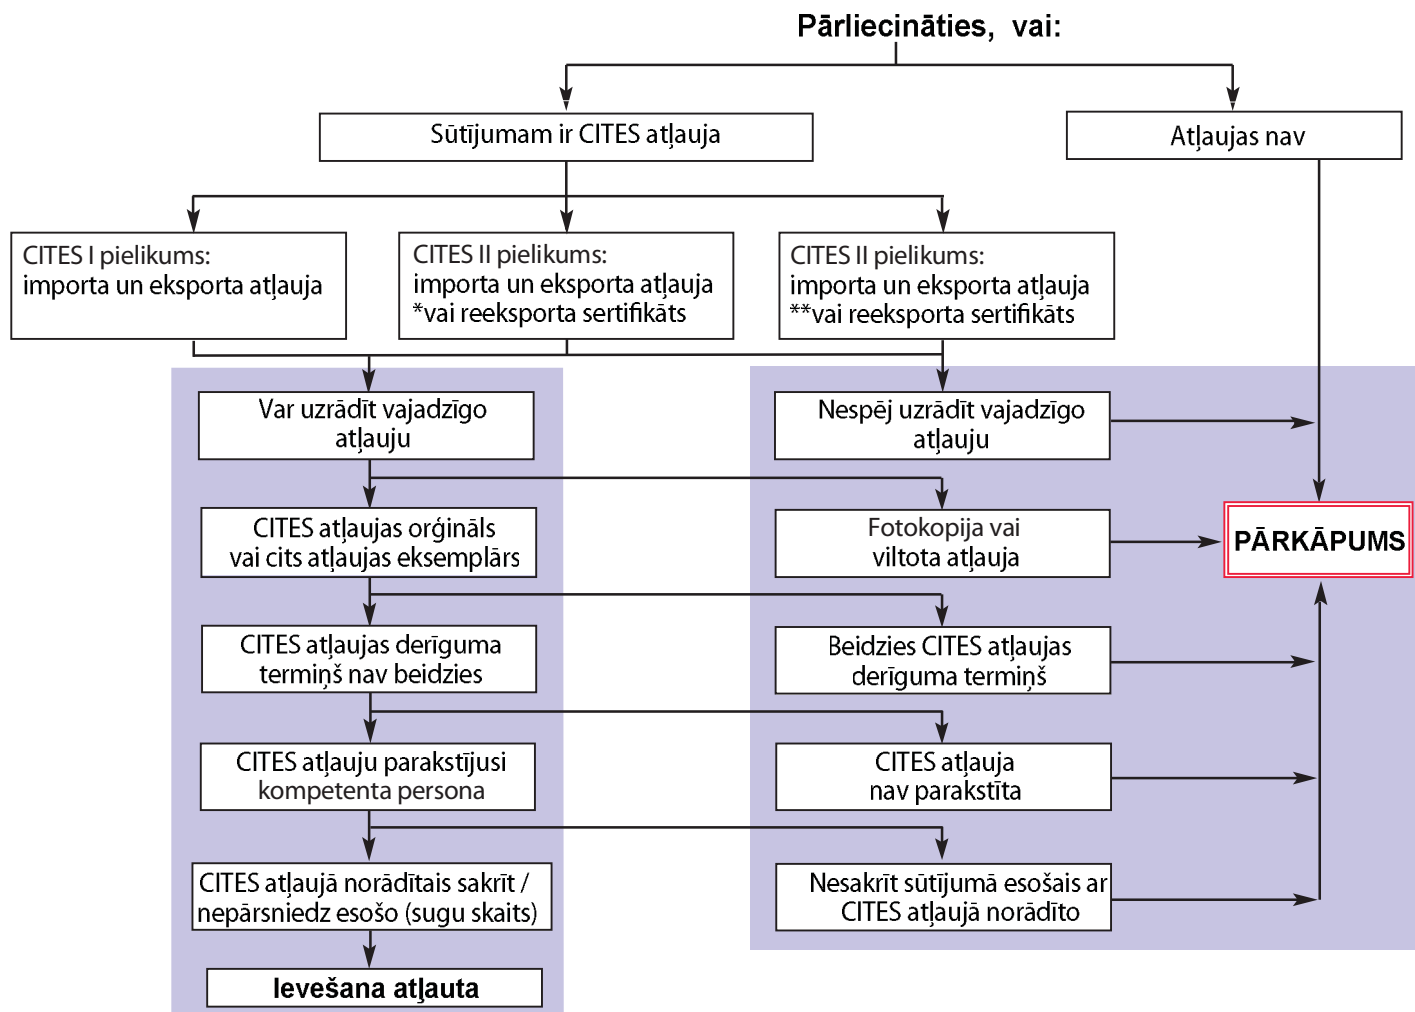

Kā noteikt sugu, ja CITES atļaujā vai citā legālu izcelsmi apliecinošā dokumentā norādīts sugas nosaukums, kā arī to, vai tirdzniecība atļauta?

Satura rādītāja B sarakstā **?-23** atrodiat sugas zinātnisko nosaukumu, kas redzams CITES atļaujā vai citā dokumentā, un pretim - atbilstošo lappusi ar sugas aprakstu

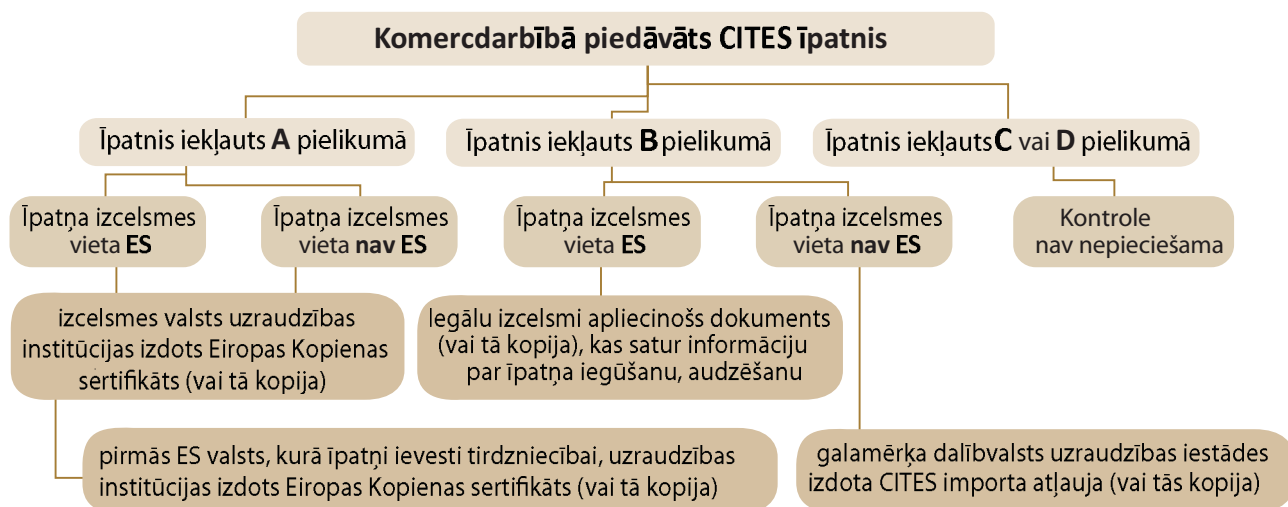

Kā lietot noteicēju?

Kā noteikt, vai CITES atļauja vai legālu izcelsmi apliecinošs dokuments derīgs?

* izņēmumi attiecībā uz personīgiem un mājas piederumiem, tai skaitā medību trofejām

** ja īpatnis nav no valsts, kurā tas iekļauts CITES III pielikumā, nepieciešams dokuments, kas to apliecina.

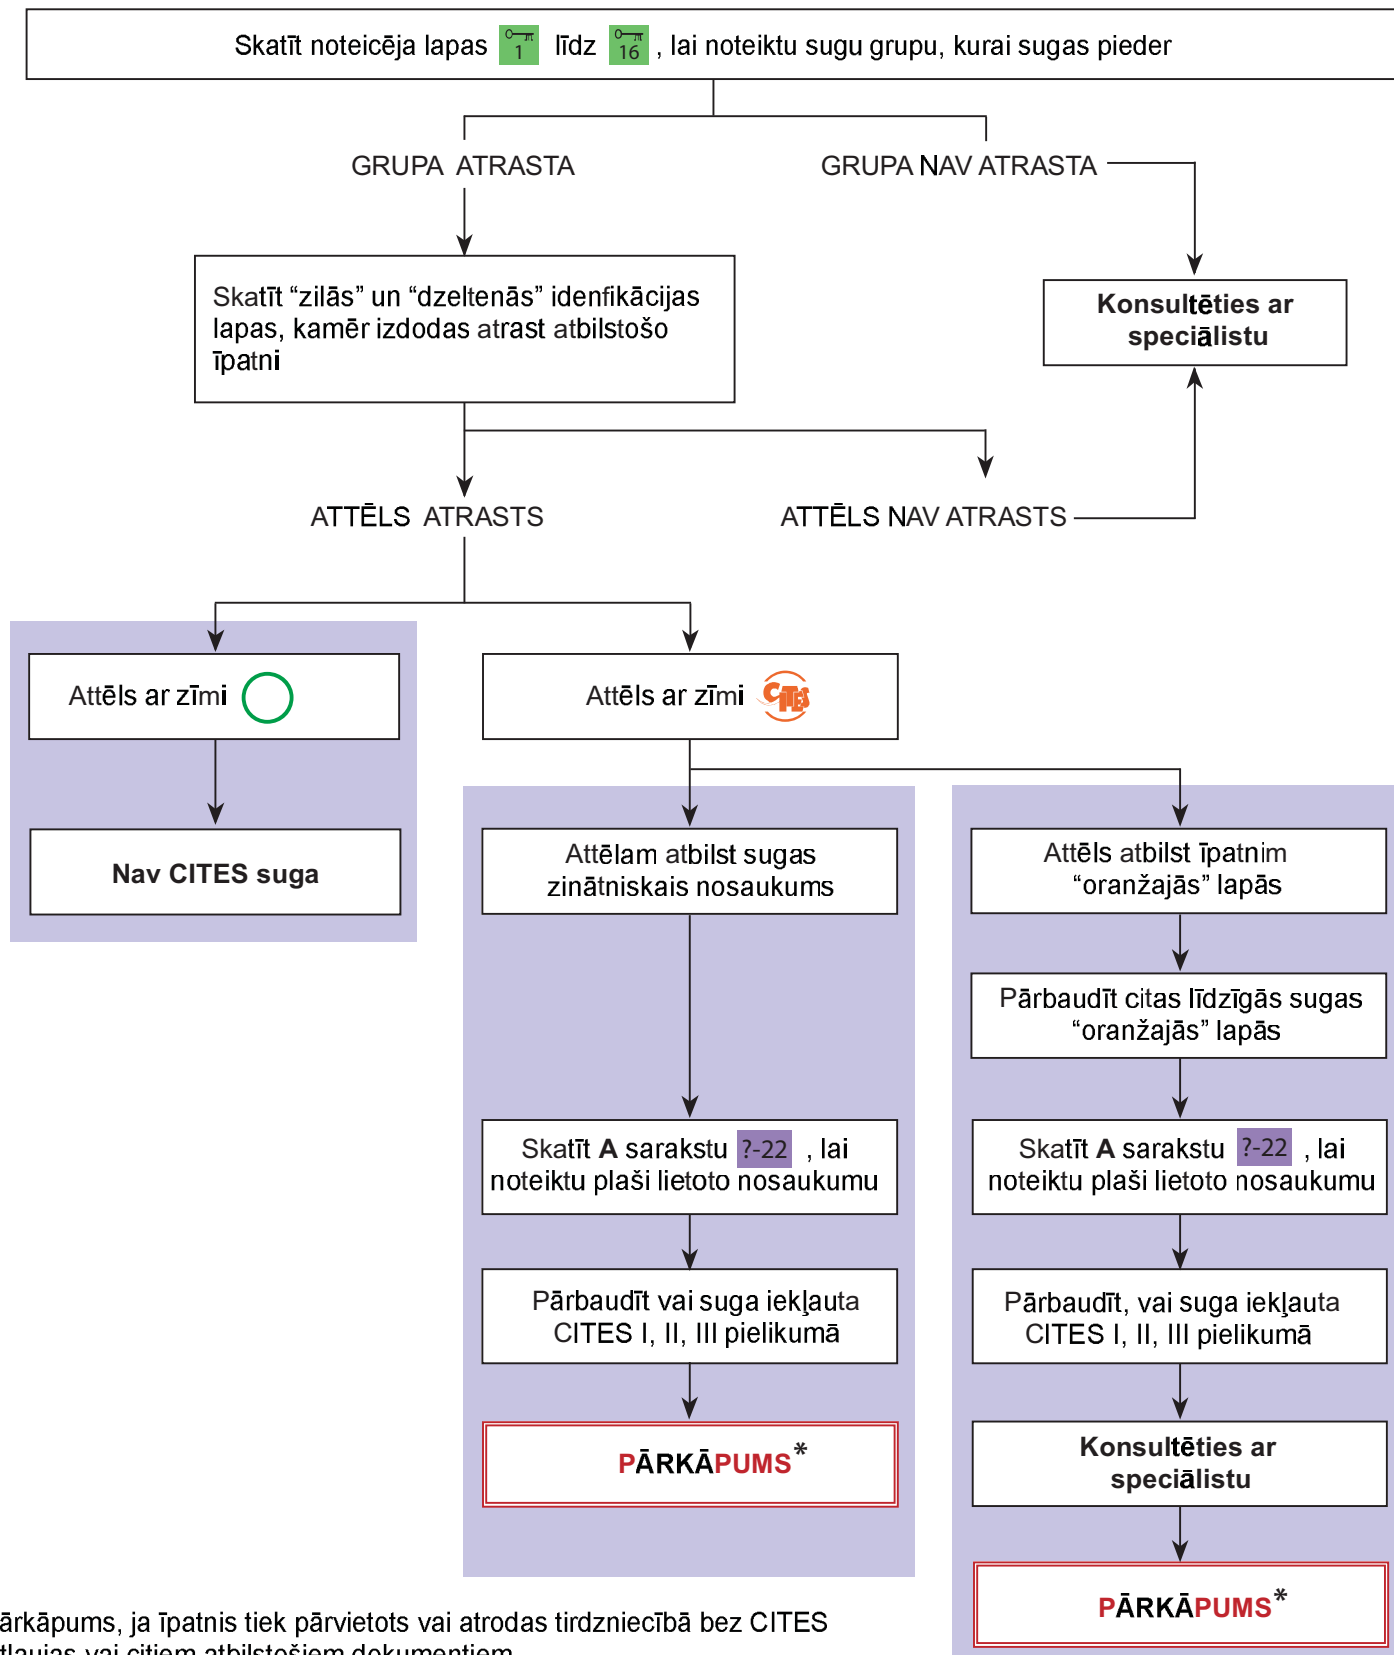

Dokumenti, kas jāspēj uzrādīt Valsts vides dienesta inspektoriem, veicot komerciālas darbības ar Padomes Regulas Nr. 338/97 pielikumos iekļautajiem īpatņiem.

Kā lietot noteicēju?

E ?

Kā noteikt sugu, kuras nosaukums nav redzams pavaddokumentā?

* pārkāpums, ja īpatnis tiek pārvietots vai atrodas tirdzniecībā bez CITES atļaujas vai citiem atbilstošiem dokumentiem.

Kā lietot noteicēju?

Piemērs, kā noteikt sugu.

Sugas noteikšanas procesā jāsalīdzina putna raksturīgās pazīmes ar tām pazīmēm, kas attēlotas noteicējā. Pirmais solis sugas noteikšanā ir izskatīt visas atslēgas lapas (skatīt ?-15) secīgi, sākot no 1. lapas līdz 16. lapai. Veiksmīgai sugas noteikšanai ir svarīgi pievērst uzmanību katrai atslēgas lapai bez izņēmuma.

Par piemēru izmantosim attēlā redzamo putnu (turpmāk – putns x). Pirmais solis ir izskatīt zaļās lapas – atslēgas lapas. 1. lapā atrodamas putnu sugas, kurām ir kāju pieši. Apskatot putnu x, redzams, ka tam uz tā kājām piešu nav. Tādēļ skatāmies nākamo - 2. lapu, kurā attēloti putni, kuriem ir divi vai trīs kāju pirksti. Tā kā putnam x ir četri kāju pirksti, pāršķiram 3. lapu, kurā attēloti putni ar kāju pirkstiem pāros. Putnam x ir trīs uz priekšu vērsti kāju pirksti, bet viens kājas pirksts vērsts atpakaļ, tādēļ šķiram nākamo lapu. Lapā 4. attēloti putni ar garām astēm. Tā kā putnam x aste ir īsa, pievēršam uzmanību nākamajai atslēgas lapai. Putnam x ir garas kājas un taisns knābis, un tas visvairāk līdzinās 5. lapā attēlotajiem putniem. Siluets, izmērs, galvas un kāju pazīmes no otrās grupas ilustrācijām atbilst putnam x. Ir izdevies noteikt putnu grupu, kurai putns x pieder. Vairumā gadījumu šī grupa sakrīt ar taksonomisko grupu – dzimtu (skatīt ?-20). Dzimta tiek sadalīta ģintīs, ģints tiek sadalīta sugās. Visām sugām un ģintīm no vienas dzimtas ir liela daļa līdzīgu pazīmju, tādēļ zinātnieki tās klasificē kā radniecīgas.

Kā lietot noteicēju?

Piemērs (turpinājums)

Atslēgas lapas sniedz norādi uz aprakstošo zilo lapu 1 (skatīt ?-18), tad uz aprakstošo dzelteno lapu 1 (skatīt ?-14). Aprakstošajā zilajā lapā 1 atrodams īss noteiktās dzimtas apraksts (skatīt ?-20). Tā ir gārņu *Ardeidae* dzimta, kurā iekļauti gārņi un dumpji. Kā redzams - noteicējā izmantotas tikai dažas krāsas. Krāsu izmantošana noteicējā tiks izskaidrota nākamajās lapās (skatīt ?-11 un ?-12). Aprakstošajā zilajā lapā 1 attēlots tipisks šīs dzimtas putna siluets, kā arī norādīti aprakstošo lapu numuri, kas jāskatās tālāk. Teksts zilās lapas augšdaļā sniedz vispārēju informāciju, norādot, ka gārņu dzimtā ir 65 sugas, no kurām CITES I vai II pielikumā iekļauta nav neviena, tomēr četras sugas iekļautas CITES III pielikumā. Šīs četras sugas arī attiecīgi var nokļūt CITES kontrolējošo iestāžu redzeslokā, tāpēc pie tām ir piktogramma . Atlikusī 61 gārņu dzimtas suga nav iekļauta CITES pielikumos, tomēr var būt citi normatīvie akti, kas nosaka šo sugu pārvadāšanu, tirdzniecību vai cita veida izmantošanu.

Tā kā putns x neatbilst nevienai no aprakstošajā zilajā lapā 1 redzamajām sugām, sekojiet norādēm lapas apakšā, kas liek pievērst uzmanību aprakstošajai dzeltenajai lapai un aprakstošajai oranžajai lapai 2 (skatīt ?-21). Noteicējā ir attēlots liels skaits dažu dzimtu sugu, līdz ar to praksē iespējama vairāku noteicējā doto norāžu salīdzināšana ar nosakāmo sugu.

Aprakstošajā dzeltenajā lapā 1 dzimtai raksturīgais siluets ir redzams atkārtoti, kā arī pieejams lielāks skaits šīs dzimtas putnu attēlu. Noteikšanas procedūra ir tā pati – skatīt noteicēja lapas, kamēr tiek atrasts attēls, kas atbilst nosakāmajam putnam.

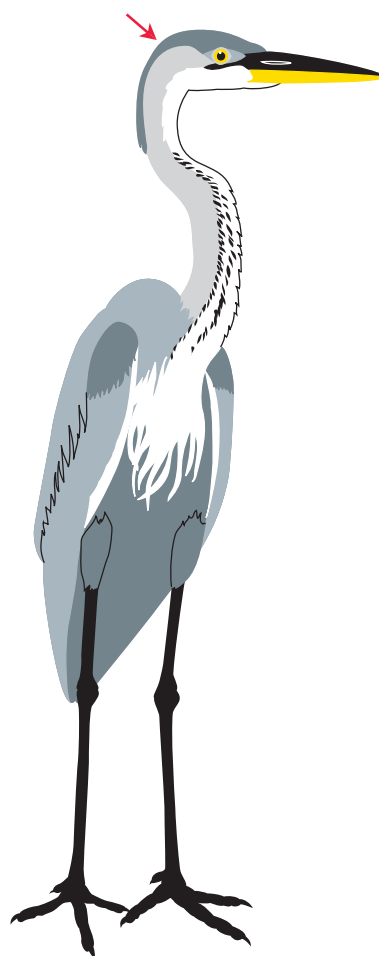

Kā lietot noteicēju?

Piemērs (turpinājums)

Pievērsiet uzmanību piktogrammai labajā augšējā aprakstošās lapas stūrī. Tā ir svarīga informācija sugas noteikšanas procesā. Katra piktogramma izceļ to ķermeņa daļu, kurai jāpievērš palielināta uzmanība. Ja salīdzina putna x galvu ar aprakstošajā dzeltenajā lapā **1** attēloto putna galvu, redzams, ka pazīmes atbilst sugai Ardea goliath.

Salīdzinot arī citas putna x pazīmes ar noteicēja informāciju, ir skaidrs, ka putns x pieder sugai Ardea goliath. Izmantojot sugas zinātnisko nosaukumu, A sarakstā (skatīt **?-22**) iespējams atrast sugas plaši izmantotos nosaukumus citās valodās. Tā kā sugai Ardea goliath pievienota piktogramma , šī suga nav CITES kontroles objekts. Citos gadījumos jāpārbauda sugas statuss (CITES I, II, III) pielikums un tas, vai sugas komerciālai izmantošanai / importam / eksportam nepieciešamā CITES atļauja vai citi dokumenti ir derīgi. Ja dokumenti ir derīgi, sugas izmantošana ir atļauta, ja vien šī sugas izmantošanu neregulē citi normatīvie akti.

 Ardea goliath

Kā lietot noteicēju?

Citi gadījumi

Ja sugas attēlam blakus ir viens vai vairāki cipari un piktogramma , līdzīgi kā blakus attēlā, sugas noteikšanā jākonsultējas ar speciālistu. Iesakām pāriet uz aprakstošajām oranžajām lapām (skatīt [?-21](#)), atrast iespējamo sugas nosaukumu un nosūtīt informāciju speciālistam, sekmējot sugas noteikšanas procesu.

Ja pie sugas attēla ir piktogramma , suga nav iekļauta CITES pielikumos. Šajā gadījumā, ja vien minētās sugas izmantošanu neregulē citi normatīvie akti, ar speciālistu var nekonsultēties.

Pie sugu attēliem ir arī piktogrammas, kas norāda uz to, kādiem mērķiem sugu mēdz izmantot (skatīt [?-19](#)). Blakus attēlā kā piemērs norādīta suga, kuru izmanto tirdzniecībā tās spalvu dēļ.

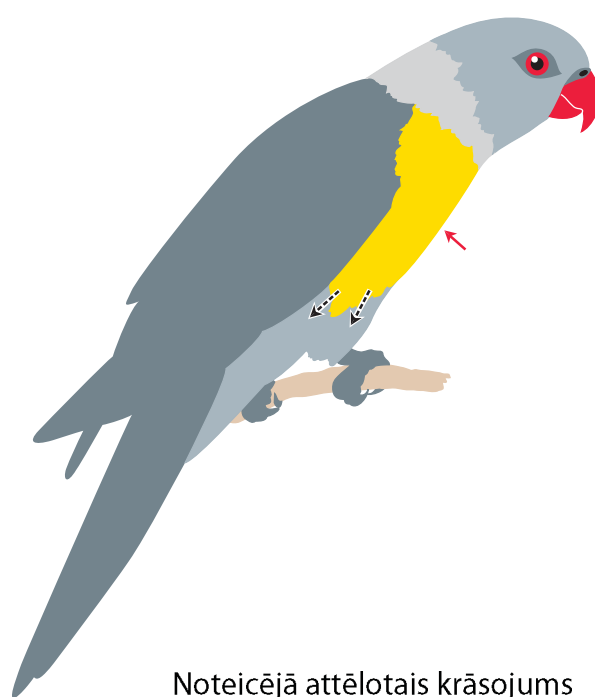

Kā lietot noteicēju?

Kāpēc noteicējā tiek lietotas tikai dažas krāsas?

Sugu identificēšanas shēma noteicējā veidota, galveno uzmanību pievēršot putna krāsas tipam, mazāk konkrētajai krāsai. Kā svarīgākās krāsas sugu identificēšanā ir norādītas sarkanā, dzeltenā un zilā. Visas citas krāsas, kurām sugas noteikšanā ir otršķirīga nozīme, attēlotas trīs dažādu toņu pelēkā krāsā. Piemērā apakšā ir papagailis, kura zinātniskais nosaukums ir *Trichoglossus euteles*. Lapas kreisajā pusē putns attēlots tā dabiskajā krāsojumā, savukārt lapas labajā pusē šī suga attēlota tā, kā tā redzama šajā noteicējā, akcentējot tikai sugas noteikšanā nozīmīgākās detaļas.

Sarkanā bulta  norāda svarīgākās pazīmes, kas konkrēto sugu atšķir no citām līdzīgām sugām. Šajā piemērā uzmanība galvenokārt jāpievērš krāsojumam uz putna krūtīm.

Pārtrauktās bultas  norāda, ka dzeltenais krāsojums uz putna krūtīm var būt arī zemāk vai arī pāriet citas krāsas krāsojumā (šajā gadījumā - zaļā). Šīs bultas galvenokārt norāda uz iespējamo krāsojuma varietāti starp sugas īpatņiem. Ievērojiet trīs toņu pelēkās krāsas lietojumu noteicējā, kas liecina par dažādu krāsu krāsojumu, kam ir otršķirīga nozīme sugas identificēšanā. Pelēkās krāsas izmantošana attēlā veicina pievērst uzmanību raksturīgajām pazīmēm.

Kā lietot noteicēju?

E
?

Izmantotās krāsas

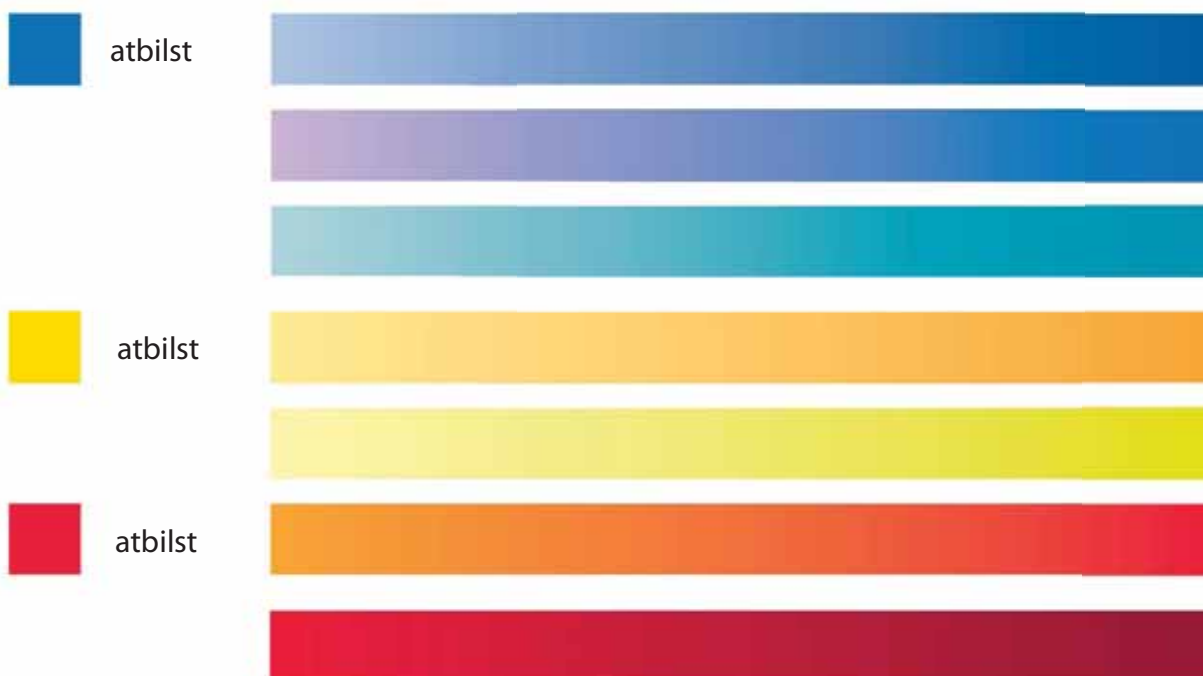

Baltā un melnā krāsa, ja sugai šīs krāsas raksturīgas, attēlotas šādi:

Trīs toņu pelēkā krāsa izmantota, lai attēlotu sugas krāsojumu, kam ir otršķirīga nozīme sugas identificēšanā. Piemēram, tādas krāsas kā brūnā vai zaļā noteicējā attēlotas kā trīs toņu pelēkā krāsa. Pelēkās krāsas izmantošana noteicējā atvieglo sugas identificēšanas procesu.

Noteicējā izmantota sarkanā, zilā un dzeltenā krāsa, lai norādītu uz svarīgākajām un vieglāk nosakāmajām sugas pazīmēm. Tā kā dabā sastopamas dažādas zilās, sarkanās un dzeltenās krāsas variācijas pat vienas sugas putnu krāsojumā, noteicējā izmantotās krāsas attēlo visu krāsu diapazonu šo trīs krāsu toņu skalā. Piemēram, sarkanā krāsa aptver visu sarkanās krāsas diapazonu sākot no rozā līdz violetam, ieskaitot oranžu. Svarīgākais ir nevis atrast putna krāsojuma īsto krāsas variāciju, bet gan krāsu variāciju, kas svarīga, lai sugu identificētu.

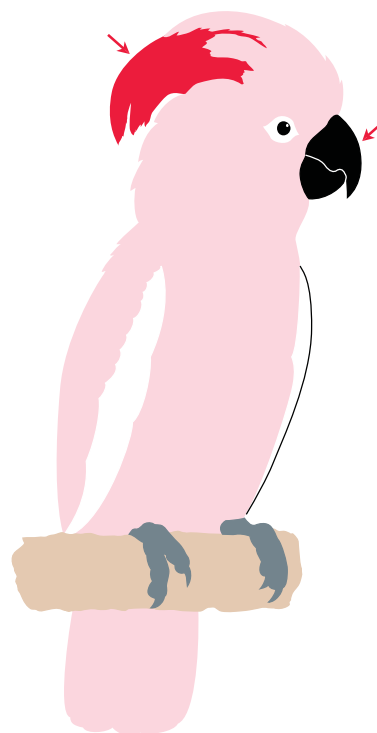

Kā lietot noteicēju?

E
?

Violetā krāsa ir grūti iekļaujama zilās vai sarkanās krāsas toņu skalā. Tā tiek izmantota tikai dažu sugu aprakstos, piemēram, *Eos reticulata*. Par konkrēto sugu *Eos reticulata* svarīgi piebilst, ka šādas bultas izmantošana norāda uz slēpta sarkana krāsojuma klātbūtni astes apakšdaļā, - pazīmi, kas raksturīga daudzām papagaiļu sugām.

Rozā krāsa tiek izmantota tikai dažos gadījumos, ja sugas krāsojumā ir gan sarkanā, gan rozā krāsa, un tikai sarkanās krāsas izmantošana apgrūtina sugas pazīmju izcelšanu. Piemēram, kā tas ir sugai *Cacatua molluscensis*.

Kā lietot noteicēju?

Krāsu un simbolu nozīme

Sadaļa  violetā krāsā ir noteicēja ievaddaļa, kas izskaidro noteicēja uzbūvi un lietošanas principus.

Sadaļa  zaļā krāsā apvieno atslēgas lapas, kas veido pirmo posmu sugas identificēšanas procesā.

Aprakstošajās zilajās lapās  attēlotas sugas, ģintis vai dzimtas, kuru identificēšana ir viegla to formas un krāsojuma dēļ. Tomēr atsevišķu sugu noteikšanā, iespējams, nepieciešama speciālista palīdzība.

Aprakstošajās dzeltenajās lapās  attēlotas sugas, ģintis vai dzimtas, kuru noteikšanai nepieciešama putnu tuvāka aplūkošana, vai arī šo sugu noteikšanā nepieciešama speciālista palīdzība.

Aprakstošajās oranžajās lapās  atrodams putnu sugu saraksts, kuras attēlotas aprakstošajās zilajās un dzeltenajās lapās, bet par kuru noteikšanu labāk konsultēties ar speciālistiem.

Sadaļā gaiši pelēkā krāsā  atrodams A saraksts, kurā norādīti visu attēloto sugu zinātniskie nosaukumi. Zinātniskie nosaukumi sakārtoti alfabēta secībā un tiem atbilst sugu plaši lietotie nosaukumi svešvalodās.

Tumši pelēkā sadaļā  atrodams B saraksts, kurā norādīti visu CITES putnu sugu zinātniskie un plaši izmantotie nosaukumi. Sarakstā iekļauti arī dzimtu nosaukumi, sugas atbilstība konkrētam CITES pielikumam, kā arī lappuse, kurā suga noteicējā attēlota, ja tāda ir.

Kā lietot noteicēju?

Atslēgas lapas

Atslēgas lapas norāda uz noteicējā attēloto putnu dzimtu vai ģinšu raksturīgajām pazīmēm. Atslēgas lapās doti norādījumi uz noteiktām aprakstošajām lapām, kurās dzimta vai ģints attēlota. Atslēgas lapas jāizskata secīgi no **0-π 1** līdz pat **0-π 16**. Izlaižot kādu no atslēgas lapām, var nonākt pie nepareiza rezultāta.

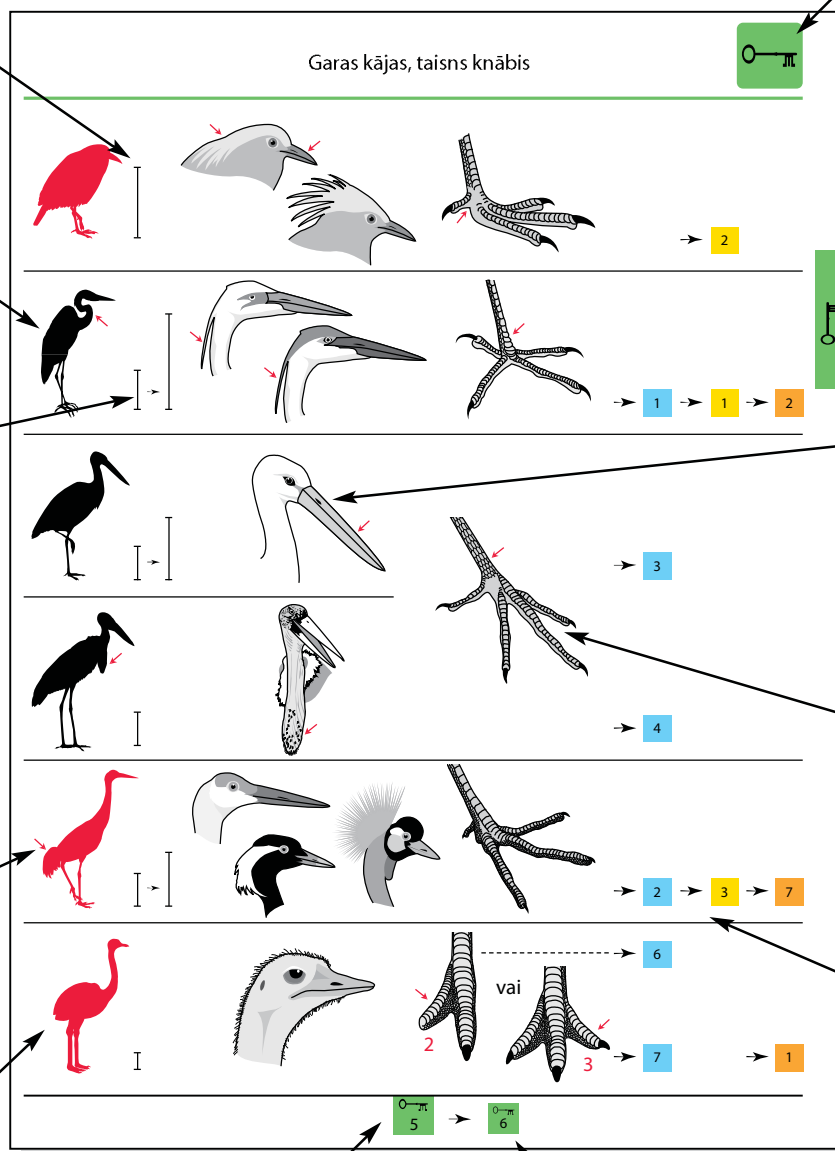

Melnajai līnijai atbilst 30 cm.
Zilajai līnijai atbilst 5 cm.
Piemēram, skatīt **?-17** lapu.

Melns siluets nozīmē, ka tikai dažas šīs grupas sugas iekļautas CITES

Izmēru iespējamās variācijas grupas ietvaros

Bulta norāda uz svarīgām detaļām

Sarkans siluets nozīmē, ka visas šīs grupas sugas iekļautas CITES

Pazīmes uz galvas

Pazīmes uz kājām

Vispirms jāaplūko šīs lapas dažādās noteicēja daļās

Pašreizējā lapa

Nākošā lapa, kura jāaplūko

Kā lietot noteicēju?

Katrā atslēgas lapā attēlota kāda putnu dzimta. Lai gan katrai dzimtai ir tai raksturīgas pazīmes, daļa specifisko pazīmju dažām dzimtām ir kopīgas. Šīs pazīmes ir norādītas katras atslēgas lapas augšpusē. Atslēgas lapas jāskata pēc kārtas šādā secībā:

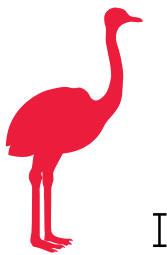

Kā lietot noteicēju?

Nekad neizlaid atslēgas lapas un sāc noteikšanu, secīgi pārskatot visas atslēgas lapas no $\frac{0-\pi}{1}$ līdz $\frac{0-\pi}{16}$, jo katra lapa ir svarīga. Piemēram, lieli putni bez cekuliem atrodami galvenokārt atslēgas lapā $\frac{0-\pi}{15}$, tomēr atslēgas lapa $\frac{0-\pi}{15}$ nav vienīgā lapa, kurā atrodami lieli putni bez cekuliem. Tādēļ atslēgas lapas skaties secīgi sākot no $\frac{0-\pi}{1}$ līdz $\frac{0-\pi}{16}$.

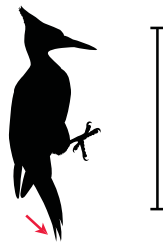

Izmēri

Lai saprastu putna izmēru, pievērs uzmanību melnajai (30 cm) un zilajai (5 cm) izmēru skalai blakus putnu siluetei. Ja blakus putnu siluetei ir melnā izmēru skala, blakus nosakāmajam putnam novieto 30 cm garu lineālu. Ja blakus putna siluetei ir zilā izmēru skala, blakus nosakāmajam putnam novieto 5 cm garu lineālu. Proporcijas starp lineālu un nosakāmo putnu īpatni atbilst noteicēja ilustrācijās redzamajam.

Piemēram:

Strausu dzimta *Struthionidae*,
izmērs aptuveni 240 cm

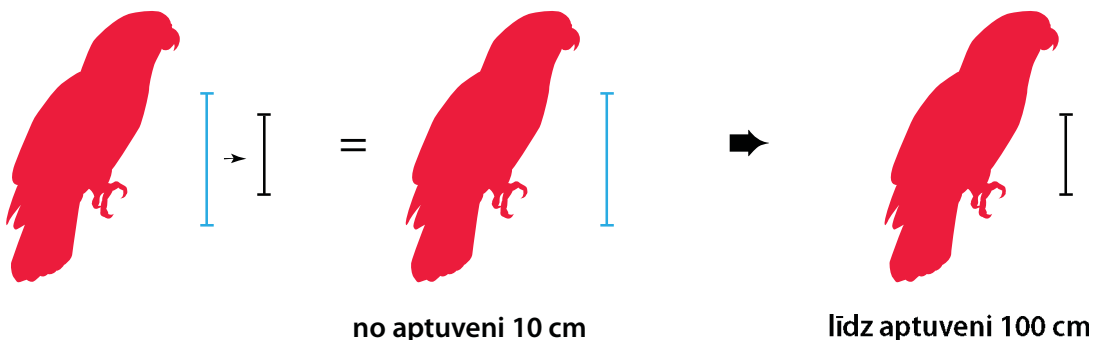

Dzilnu dzimta *Picidae*,
izmērs aptuveni 30 cm

Strazdu dzimta *Sturnidae*,
izmērs aptuveni 17 cm

Papagaiļveidīgie *Psittaciformes*, kuru izmēri variē

Visos gadījumos izmēru skala norāda aptuveno izmēru. Skala ir indikatīvs izmēru rādītājs un neatspoguļo precīzo izmēru.

Kā lietot noteicēju?

E ?

Aprakstošās lapas

Aprakstošajās lapās attēlotas sugas, ģintis un dzimtas, kas iekļautas noteicējā. Šajās lapās piktoqrammu veidā papildus norādīts, kādu produktu vai izstrādājumu veidā šie putni tiek izmantoti komerciāli.

Piktogramma, kas norāda, ka šo sugu noteikšanā uzmanība galvenokārt jāpievērš galvai un astei

Plaši lietotie šīs sugu grupas nosaukumi

Saīsinājums PD-2-3-4 ar atsauci uz aprakstošajām oranžajām lapām

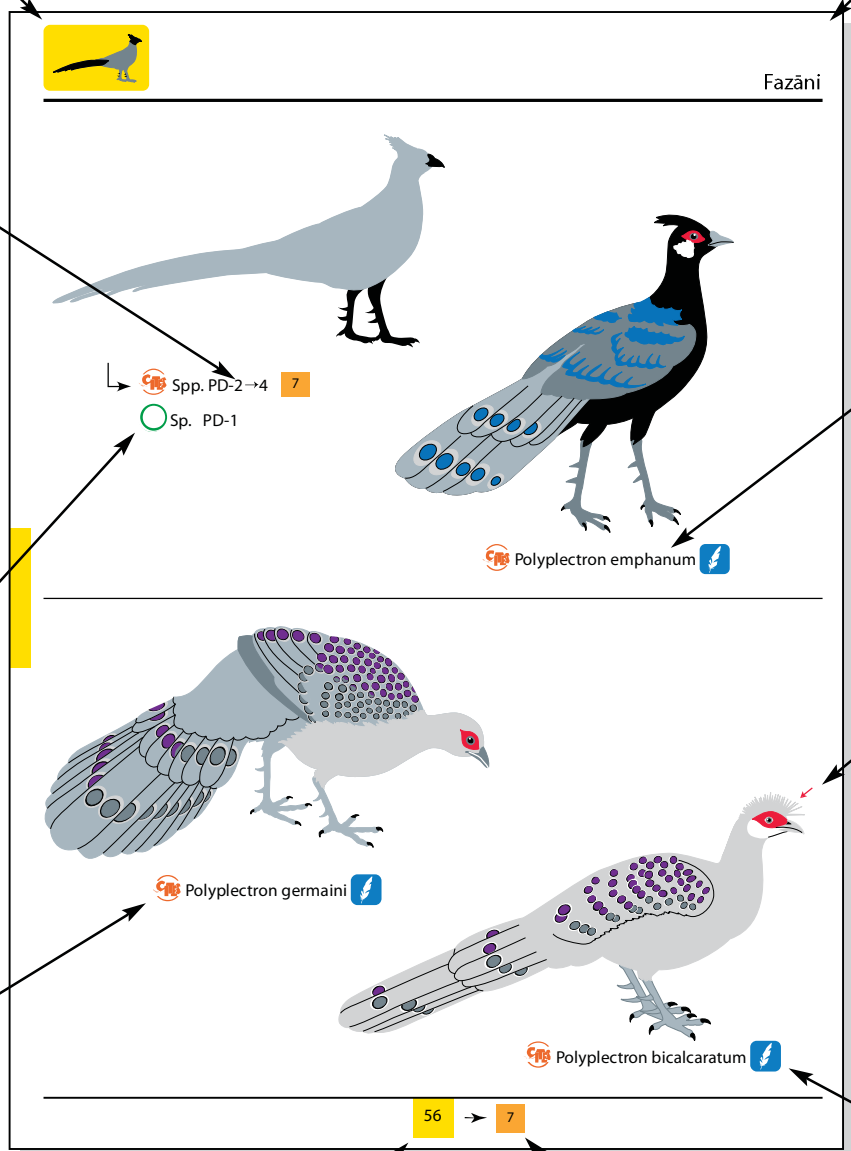

Piktogramma, kas norāda, ka suga nav iekļauta CITES pielikumos

Piktogramma, kas norāda, ka suga iekļauta CITES pielikumos

Sugas zinātniskais nosaukums

Bulta norāda uz svarīgu pazīmi

Piktogramma, kas norāda, kāda veida produkti no sugas tiek izmantoti

Pašreizējā lapa

Nākošā lapa, kura jāaplūko

Kā lietot noteicēju?

Produktu un izstrādājumu piktogrammu nozīme

Produktu un izstrādājumu piktogrammas redzamas aprakstošajās zilajās un dzeltenajās lapās. Piktogramma var atbilst daudzām sugām no vienas dzimtas. Šādā gadījumā piktogramma būs izcelta lodziņā virs dzimtas. Piktogrammas var būt redzamas arī pie dažām sugām aprakstošajās oranžajās lapās. Visos gadījumos piktogrammas norāda uz to, ka suga tiek komerciāli izmantota lielos apjomos šādiem mērķiem:

Pārtikas produkti

Olas (inkubēšanai vai pārtikai)

Ādas izstrādājumi

Rotaslietas

Spalvas

Veselas ādas ar spalvām

Galvaskausi

Kājas, nagi

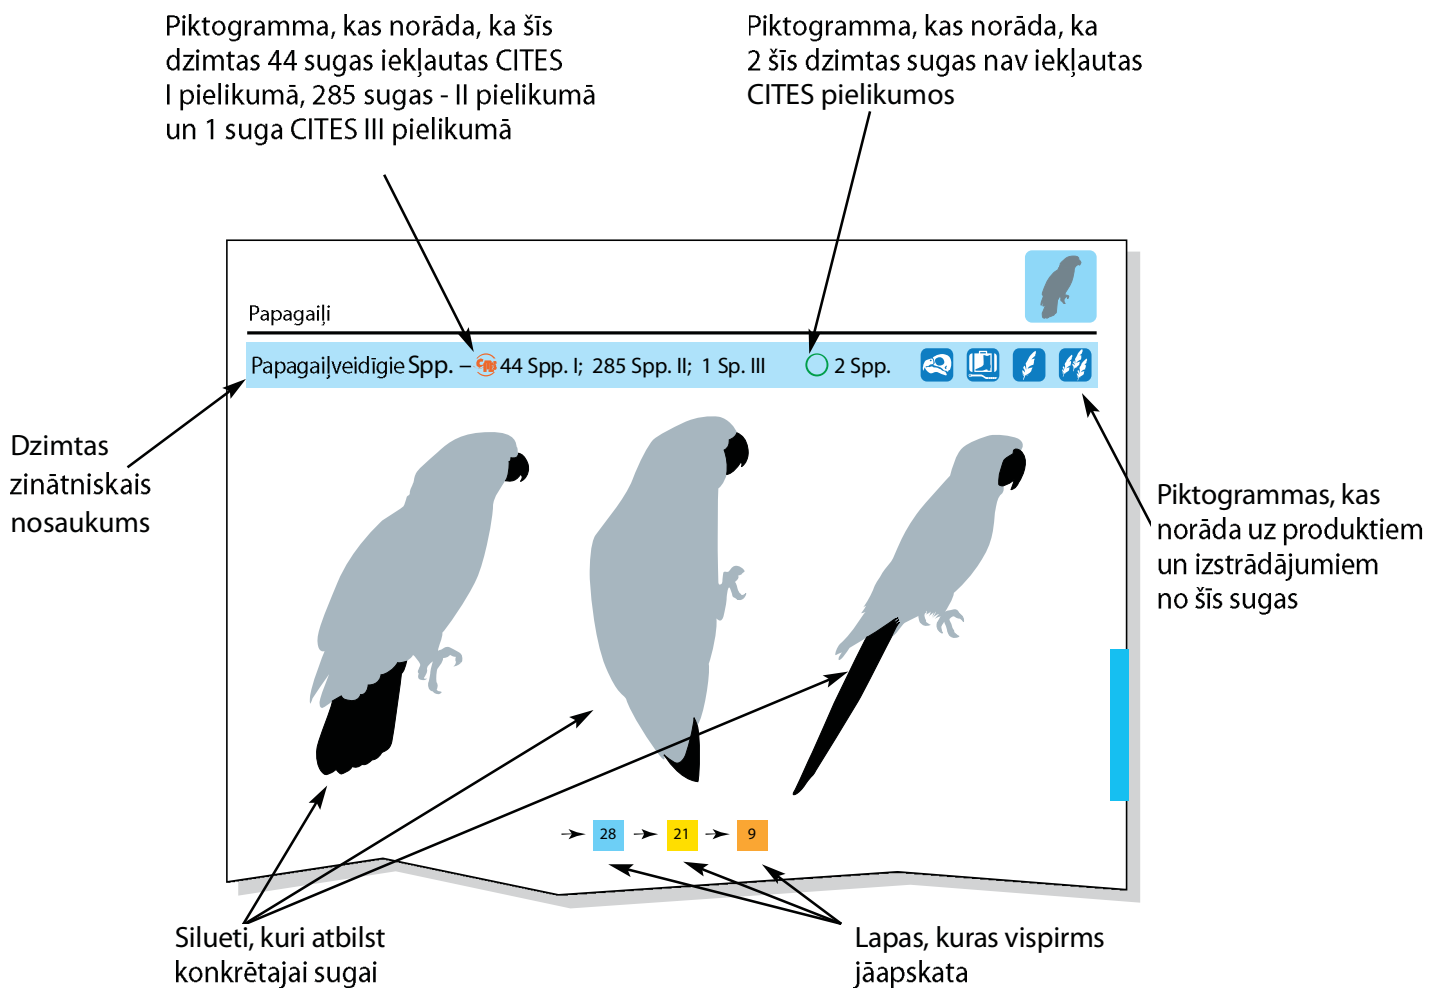

Dažādi produkti

E
?

Dzimtu apraksti

Dzimtu apraksti ir ievietoti pirms sugu aprakstošajām zilajām un dzeltenajām lapām. Dzimtu aprakstos ievietoti tipiski dzimtas putnu silueti un ietverta informācija par CITES pielikumos iekļauto un neiekļauto sugu skaitu. Zinot putnu sugu skaitu, kas no konkrētās dzimtas iekļauts CITES pielikumos, būs saprotams, cik daudz uzmanības jāpievērš šīs dzimtas putnu tirdzniecības kontrolei. Dzimtu aprakstos ievietotas produktu un izstrādājumu pictogrammas, kā arī atsauces uz aprakstošajām lapām.

* Šie dati atbilst 2012. gada CITES sugu sarakstam.

levēro, ka saīsinājums "Spp." apzīmē vārdu "sugas"(daudzskaitlī), savukārt saīsinājums "Sp." attiecas uz vienu "sugu".

Kā lietot noteicēju?

Aprakstošās oranžās lapas

Aprakstošajās oranžajās lapās ir saraksts ar to sugu zinātniskajiem nosaukumiem, kas attēlotas noteicējā un kuru noteikšanā labāk konsultēties ar speciālistu.

Piktogrammas, kuras norāda dzimtu

Dzimtas nosaukums

Produktu un izstrādājumu piktogramma

Dzimtas nosaukuma saīsinājums

Piktogramma norāda, ka suga iekļauta CITES pielikumos

Zvaigznīte norāda, ka suga noteicējā attēlota ar dzimtai raksturīgo siluetu

Sugai piešķirtais numurs zilajā vai dzeltenajā aprakstošajās lapās. Burtu saīsinājums apzīmē dzimtu, kā šajā gadījumā - "AR"="Ardeidae"

Piktogramma norāda, ka suga nav iekļauta CITES pielikumos

A saraksts

A sarakstā norādīti noteicējā attēloto sugu zinātniskie un plaši izmantotie nosaukumi angļu, franču, spāņu un latviešu valodās. Nosaukumi doti zinātnisko nosaukumu alfabēta secībā. Katrai valodai lietots savs rakstības stils.

A SARAĶSTS

Scientific	English	French	Spanish	Latviski
<i>Accipiter brevipes</i>	Levant Sparrow-Hawk	Épervier à pieds courts	Gavilán griego	Īskāju vanags
<i>Accipiter cooperii</i>	Cooper's Hawk	Épervier de Cooper	Gavilán palomero	Kupera vanags
<i>Accipiter gentilis</i>	Northern Goshawk	Autour des palombes	Gavilán pollero	Vistu vanags
<i>Accipiter gularis</i>	Japanese Sparrowhawk	Épervier du Japon	Gavilán japonés	Japānas zvirbuļvanags
<i>Accipiter haplochrous</i>	White-bellied Goshawk	Autour à ventre blanc	*	Baltvēdera vanags
<i>Accipiter imitator</i>	Imitator Sparrowhawk	Autour imitateur	Azor imitador	Imitatorvanags
<i>Accipiter nisus</i>	Eurasian Sparrowhawk	Épervier d'Europe	Gavilán común	Zvirbuļvanags
<i>Accipiter soloensis</i>	Chinese Goshawk	Épervier de Horsfield	*	Ķīnas zvirbuļvanags
<i>Accipiter striatus</i>	Sharp-shinned Hawk	Épervier brun	Azor rojizo	Svitrainais vanags
<i>Aceros corrugatus</i>	Wrinkled Hornbill	Calao à casque rouge	Cálaho corrugado	Degunragputns
<i>Aceros nipalensis</i>	Rufous-necked Hornbill	Calao à cou roux	Cálaho del Nepal	Rudkaula degunragputns
<i>Aceros subruficollis</i>	Plain-pouched Hornbill	Calao à gorge claire	Cálaho de Papua	Degunragputns
<i>Aceros undulatus</i>	Wreathed Hornbill	Calao festonné	Cálaho ondulado	Degunragputns
<i>Aegyptius monachus</i>	Cinereous Vulture	Vautour moine	Buitre negro	Melnais grifs

Saraksts B

B sarakstā norādīti sugu plaši lietotie nosaukumi alfabēta secībā. Sarakstā pretim sugas plaši lietotajam nosaukumam norādīta dzimta, CITES statuss un norāde par to, vai un kur suga noteicējā attēlota.

Plaši lietotais nosaukums Zinātniskais nosaukums CITES statuss, dzimta Lappuses noteicējā

...	Rietumu mazais gārnis	<i>Egretta gularis</i>	N.C, AR-9	1	2
...	Āfrikas zivju ērglis	<i>Haliaeetus vocifer</i>	C, AC-39	18	6

Zinātniskais nosaukums, kas redzams pie attēla noteicējā

Alfabētiskajā sarakstā norādīts:

- noteicējā attēlotās sugas nosaukums (A saraksts)
- CITES pielikumos iekļautās ģints vai sugas, kas nav attēlota noteicējā, nosaukums
- plaši lietotais sugas nosaukums

...	Baltvaigu garkaklis	<i>A nas bahamensis</i>	N.C, AN-5	11*	3
...	Kubas amatāre	<i>A mazona leucocephala</i>	C, PS	45	

N.C Suga nav iekļauta CITES pielikumos ○

C Suga iekļauta CITES pielikumos 

...	Mazais ērglis	<i>Aquila pomarina</i>	C, AC-12	14*	5
...	Citroncekula kakadu	<i>Cacatua sulphurea</i>	C, PS-31-32-33-34-35	30	10-11

AC, PS... Putnu dzimtu nosaukumu saīsinājumi. Kā piemērs *Accipitridae*, *Psittacidae*. Pilns nosaukums lappusē [?-24](#)

PS-31... PS-31... dzimtas saīsinājums, kam seko norāde uz zilajām vai dzeltenajām aprakstošajām lapām (šajā gadījumā - uz zilajām aprakstošajām lapām), kurās attēlota suga, par kuras noteikšanu jākonsultējas ar speciālistu.

...	Garknābja irbe	<i>Rhizothera longirostris</i>	C *PD	17*	6
...	Grifs	<i>Gyps indicus</i>	C, AC-37		

* Apzīmējums * lietots, lai:

- norādītu, ka suga nav attēlota noteicējā, un šādā gadījumā simbols * pievienots dzimtas saīsinājumam (piem., *PD);

vai

- suga noteicējā nav attēlota atsevišķi, bet gan kā dzimtas siluets. Tādā gadījumā simbols* pievienots lappuses numuram, kurā siluets redzams (piemēram, 17* atbilst siluets

Šajās lapās meklējams sugas attēls

Noteicēja aprakstošajās zilajās un dzeltenajās lapās attēlotas vairāk kā 200 papagaiļu sugas. Lai noteiktu sugu, jāpievērš uzmanība putna sarkanajam krāsojumam. Svarīgi pievērst uzmanību spalvu krāsojumam, viss cits sarkanais krāsojums (piemēram, uz putna knābja, kājām u.c. ķermeņa daļām) nav jāņem vērā.

Tādad

Pionus sordidus

- uzskata, ka šai sugai ir tikai sarkanas spalvas astē.

 Pionus sordidus

Turpretim

Ara militaris

- sarkanas spalvas ir astē un uz galvas

 Ara militaris

Identificējot sugu, jāuzdod sev jautājums: „Uz kādām ķermeņa daļām putnam ir sarkanas spalvas?”

▶ Vai putnam ir sarkanas spalvas uz galvas?

▶ Vai putnam ir sarkanas spalvas uz ķermeņa?

▶ Vai putnam ir sarkanas spalvas uz astes?

▶ Citas iespējamās kombinācijas?

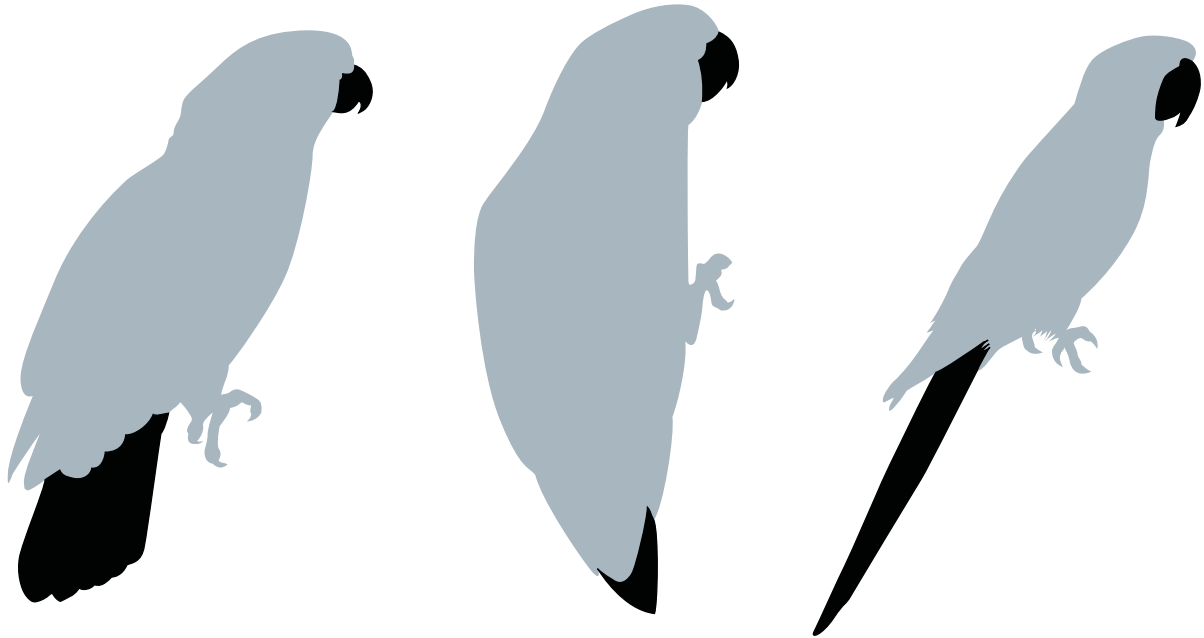

Dažas sugas, kurām grūti noteikt konkrētu sarkanās krāsas spalvu atrašanās vietu, var būt atrodamas vairākās vietās noteicējā. Ja suga noteicējā nav atrodama, par īpatņa piederību sugai konsultējies ar speciālistu.
